### **Recommend Cleaning Procedures for Surf (x)**

- Surf(x) can be effectively cleaned with non-abrasive household cleaners. After the cleaner is applied to the Surf(x) surface, a damp sponge can be used to remove the stain. A soft nylon brush can also be useful for removing embedded materials.
- Common cleaners include "409" (The Clorox Co.), "Fantastik" (S.C. Johnson) and "Simple Green" (Sunshine Markers).
- If a persistent stain remains, a towel or sponge moistened with isopropyl alcohol or rubbing alcohol can provide additional cleaning. Allowing a moistened towel/sponge to set on the stain for 15-30 minutes is an effective procedure to remove a persistent stain.
